

ICIDO Summit 2008 – Ideas with a vision

Call for Papers: Virtual Reality in Practice

Stuttgart, 09.07.2008: The ICIDO Summit provides a forum for users of virtual reality solutions where they can present particularly innovative or original approaches to a broad specialist audience. This year the conference is being held from 25 to 26 September in the Millennium Hotel in Stuttgart. Anyone wishing to make a contribution is invited to submit their proposed topic by 15 August.

Over the past few years, the ICIDO Summit has emerged as one of the major events dealing with application-oriented virtual reality (VR) in Europe. Its aim is to promote the dissemination of VR technologies in everyday company life, tap new implementation fields and develop marketable ideas. With the slogan “Get together. Eye and decide.” this year’s conference focuses mainly on virtual cooperation. ICIDO has already been able to line up a host of speakers from all over Europe for the event, including Joe Barkai of IDC as keynote speaker.

ICIDO also invites all users from scientific and practice-oriented fields to contribute lectures to the congress programme. Solutions and new ideas characterized by a high degree of innovative content, originality, outstanding benefit and particularly successful implementation are sought. The contributions submitted can be from the hardware, software or combination of the two sectors.

ICIDO will accept proposals up to 15 August. These should be sent, without form, to the following address:
ICIDO GmbH, Sebastian Grimm, Jurastraße 8, 70565 Stuttgart, sebastian.grimm@icido.de

The organizer is responsible for the selection of contributions. The presented lectures will be published in a conference volume and supplied to congress attendees free of charge.

A 500 sqm exhibition area is available to companies wishing to present their products and services to event visitors. Contact person for the hiring of exhibition space is Sebastian Grimm.

About ICIDO:

The ICIDO Group (ICIDO GmbH, fleXilution GmbH, branches in Japan and the USA) is a leading provider of interactive, visual decision systems. ICIDO solutions are simple and standardised and can be easily integrated in existing structures and processes. When using the Visual Decision Platform (VDP) technology, customers benefit from the improved assessment and evaluation potential of 3-dimensional computer data in product development, as well as the simplification and acceleration of coordination processes in interdisciplinary teams. Errors can be detected earlier, optimal solutions can be better identified and the construction of physical prototypes can be reduced. This results in considerable cost savings, reduced development times and quality enhancements. Areas of application cover the entire product development process, from design/styling, construction, set-up and production planning, all the way to marketing and sales. ICIDO provides the customer with a complete solution consisting of software and services, as well as the necessary hardware, such as a Power-Wall system. ICIDO customers are active, for example, in the automotive industry (DaimlerChrysler, BMW, Ford, Bosch, Faurecia), transportation (Siemens Transportation Systems, MTU, Rheinmetall, Airbus), engineering and plant construction

(Trumpf, Festo, IWKA and Siemens Power Generation), as well as in research and teaching (colleges of higher education: FH Esslingen, FH Pforzheim, TU Chemnitz, TU Munich, BA Mosbach).
