

Virtual Build

ICIDO's Virtual Build Applications enable the organizations to reduce its dependency on physical prototypes. Moreover, the benefits of better and earlier assessment of product performance and manufacturability represent a tremendous efficiency potential.

This innovative, hands-on, proven virtual reality environment will encompass the experience and knowledge of your employees and help validate and improve top line.

ICIDO SOLUTION

Today's competitive advantage strongly requires the digitalization of the planning and validation processes.

To bridge the gap of integrating, knowledge and personal experience, ICIDO has developed a **suite of proven and trusted applications** to help to make the digital world more interactive and realistic.

Virtual Reality means seeing and optimizing the cell layout, interacting with tooling, anticipating workflows, reviewing layouts as well as assisting ramp-ups and training.

ICIDO solutions allow integration of humans into to digital planning process.

The ICIDO Visual Decision Platform provides a universal **tool** for all stakeholders in the product development process to secure the necessary functions in design and manufacturing. ICIDO supports the practitioner in all phases of product development, from the validation, the try-out, ramp-up and training.

Virtual Build

- Workflow and layout review, Assembly simulation and optimization, Cell layout and tooling, Ramp up training, Ergonomics

Your advantages

- Increase efficiency in all steps of the product development process
- Higher quality and reliability of the results
- Decreased costs in product development
- Improve your edge over competition

The Visual Decision Company
